

Read these instructions before using the garment.

WARNING

This Air Bandit filtered bandana helps to prevent dust and certain other particles from entering the nose, mouth and lungs, and misuse may adversely affect the health of the wearer. It is important to understand that this garment does not completely eliminate the inhalation of fine particles or vapors, nor does it eliminate the risk of disease, illness, injury or death.

INTENDED USE

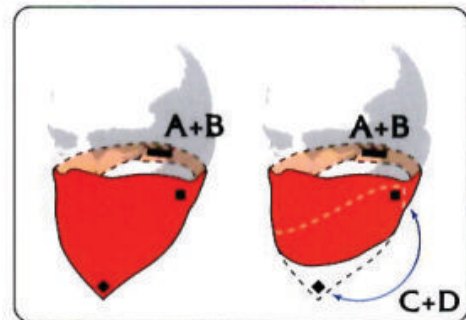

For non-harmful dusts, pollen and mold spores and certain particles encountered during indoor and outdoor activities such as leaf blowing, floor sweeping, gardening, raking, mowing, taking out the trash, and sanding of drywall and wood surfaces that are bare or painted with non-lead paint. Air Bandit is also ideal for the operation of motorcycles and all-terrain vehicles.

DO NOT USE as protection against toxic or harmful substance such as lead or asbestos. Many older and/or installed building products such as insulation may contain asbestos, which is highly toxic. If you suspect that asbestos or any other toxic material is present in your home or work site, do not touch or disturb the material as this may result in particulate and fibers being released into the air. The repair or removal of asbestos or other toxic materials should only be done by professionals trained in the safe handling of such materials or waste.

DO NOT USE this garment where there is insufficient oxygen to support life, or where high concentrations of a toxic substance may occur, as some of those substances may displace oxygen in closed or confined spaces. Always ensure that your work space is well ventilated with fresh air. This garment does not supply oxygen and is not effective or intended for use against gasses, vapors, odors and oil particles. Use extreme caution when working with rotating equipment such as lathes, drills and chippers as loose garments and clothing may become entangled.

FITTING INSTRUCTIONS

- 1) Unfold the garment fully.
- 2) Place across the face just below the eyes.
- 3) Press the FlexFit insert firmly across the bridge of the nose and along the cheekbones to mold the garment to the contour of the wearer's face.
- 4) Attach the fastener straps **(A+B)** snugly at the back of the head.
- 5) For additional protection attach the fastener tab at the lower edge of the bandana to the one beside the ear **(C+D)** or tuck the lower cowl of the garment into the shirt collar. The garment should rest just below the ear line and across the base of the lower head and neck and fit securely across the face with no noticeable gaps.

WASHING INSTRUCTIONS

This garment is re-usable. **Hand-wash in warm or hot water with liquid laundry detergent.** The flap of the garment has been left open to give full access to the filter material. Run hot water through the filter and rub the garment gently against itself as required. Rinse well and squeeze or wring gently to remove excess water. For best results and to prevent mildew, **lay the garment flat and air dry with the flap up** so that the filter material is exposed directly to the air.
